

John Sununu

Former U.S. Senator (R-NH)

These Financial Times. In a time of financial uncertainty, audiences are looking for clarity, confidence, and an insider's perspective. John Sununu is able to draw upon his firsthand experience as a former member of the TARP Congressional Oversight Panel, the former chair of a Financial Governance Working Group for the World Economic Forum, and a member of the key Senate committees, Commerce, Finance, and Banking. Sununu also has both private- and public-sector experience. He was the chief financial officer of a technology company before his time in Congress. This unique and incredibly valuable experience makes Sununu a superlative choice to discuss our nation's current fiscal situation. Straightforward, calm, and confident, he provides an in-depth look at the changing economic situation, discusses the role of the government and financial institutions, addresses the current investment environment, and outlines America's economic future. Sununu also shares an insider's perspective on the legislative process and the regulatory future for financial services, insurance, hedge funds, and the financial giants.

Engineering Tomorrow's Energy. As an engineer and a small-businessman, Senator John Sununu brings a unique perspective to the debates on energy policy, technology, and the politics and economics of climate change. With a keen understanding of the inter-workings of new technologies and their global financial implications, Sununu discusses issues surrounding renewable energy, fossil fuels, nuclear power, and proposals for carbon trading and capture.

What's Next? What are the issues that will have people talking in the next 12 months? Sununu uses his insight and experience to help explain and clarify upcoming policy debates and legislative proposals. He discusses regulatory initiatives for financial services, energy and climate change, and healthcare, as well as their impact on the political environment.

Technologically Speaking. As the world becomes more and more immersed in rapid technological innovation, everything in our day-to-day lives changes. What kind of technological changes will we see in the next 10 years? How will that change affect commerce? How will it affect the economic landscape? John Sununu draws from his mechanical engineering background, his service on the Senate Commerce Committee, and his current role as co-chair of Broadband for America to discuss the financial and policy implications of technological growth and the steps necessary to facilitate continued innovation and adaptation. Known as a media, broadband, and telecommunications policy expert, he also addresses digital communications, the internet, and broadband access.
