

Shivvy Jervis

Sustainable Innovation Expert & Forecaster

Incredible innovations shaping your business. Which digital advances need to be on your radar *now*, to be future ready? In this riveting talk, Shivvy Jervis - one of the globe's few female and Asian innovation forecasters - will take audiences on an adventure of the digital innovations shaping their industry.

Designed to ditch the jargon, the talk aims to be accessible, enlivening and focus only on human-centred innovations. Opening with a human touch, Shivvy will show us the science behind motivation and how we can use this at work.

Then, for the core part of the session she'll walk us through what to expect from areas such as either the evolution of automation/AI, Metaverse, digital identity or our connected world (based on what is most relevant to the client). Time permitting, she will deliver a memorable closing with a window into either the most fascinating jobs of the near future, skills we'll need or the signals that tell us why the near- and medium-term future is more hopeful than we might think!

The Future Is Human – Shifts in Our Work, Jobs And Skills.

- Which skills will we need to stay future ready?
- Will a robot take my job? The true risk and benefits from automation to people, how we can use it to augment our work and keep our jobs; and the surprising – and hugely encouraging - new truth about soft skills
- Digital innovations with use cases related to talent development and the environment of work such as:
 - attracting and retaining talent
 - workforce wellbeing
 - training and upskilling
 - collaboration and communication
- The critical role of people in an organisation's digital transformation
- Finally, the Inventor Mindset – how to think like an inventor or founder in your current role

The 'Science Behind...' Series. Apart from digital innovation tools, the forecasting lab Shivvy founded 7 years ago has focused in equal measure on discoveries about how our mind work. She shows us how to apply breakthroughs from neuroscience and psychology to elevate our workforce and consumers, making it personal by sharing first-hand anecdotes and moving stories, to leave audiences feeling both educated and inspired.

After the astounding success from incorporating the 'science behind engagement' theme as a short segment in her signature innovation talk, Shivvy is bringing the 'science behind...' theme to the stage as a series of either a) stand-alone talk on one topic from the below, b) one keynote covering two topics from the below.

The motivational-meets-neuroscience series comprises of these strands:

- **Science behind Engagement and Motivation** - the science of motivation i.e. what actually triggers us biologically to lose willpower or motivation, and how to use it at work or in our lives).
- **Science behind Chemistry** - and the surprising way that you can apply this to build a workforce and consumer
- **Science behind stress** - and how to use this to create thriving leaders, workforces and consumers

All in the Mind: Apply discoveries about our brains to create happier workforces (eg the science of motivation i.e. what actually triggers us biologically to lose willpower or motivation, and how to use it at work or in our lives)

Power of 6: Six innovations in six steps for the next six months for your org to sustain (and go the digital distance!)

Health innovations: The most life-changing breakthroughs about our minds and bodies

Connected Worlds: What new changes will connectivity fuel in our cities, work and lives?

Digital's dark side (privacy, ethics)

- Dirty Rotten Trackers: Your online identity needs as much protection as the real world. Exposing the hidden digital 'holes' to be aware of.
- Software decodes our human emotion each day without us even knowing it - take Alexa or Siri even - Should we let it?
- Social media is rife with privacy and security trapdoors - here's how we can amp up our safety.

Meta-what??: Demystifying the Next Internet & Metaverse
