Peter Singer

Technology and Cyber Security Futurist

Cyber Security & Cyber War: What Everyone Needs To Know. A *New York Times* best-selling author and noted expert on technology and war explores the key question and issues of a problem that has too long been left to the "IT Crowd." Cyber issues now affect us all, whether you are in business, politics, military, law, or simply as a citizen or parent, and we had better understand them. Filled with engaging stories and illustrative anecdotes, his work is structured around the key question areas of cyberspace and its security: How it all works, why it all matters, and what can we do?

Wired For War: Everything You Ever Wanted To Know About Robots, But Were Afraid To Ask. The US has gone from using a handful of robots to now having more than 7,000 "drones" in the air and 12,000 unmanned vehicles on the ground. And this is only the start, with robotic technology going global (to over 50 countries) and moving into the business world. The author of the best-selling book, *Wired for War: The Robotics Revolution and Conflict in the 21st Century,* explores the political, military, business, and ethical implications of one of the biggest changes in the history of technology.

Five Trends To Shape The Future of War, Politics, & Beyond. A best-selling author and renowned futurist explores the key trends that will shape the politics and battles of tomorrow, from new game changing technologies to the attitudes and values that the millennial youth of today will bring into the ballot box, the boardroom, and the battlefield.

The Planning Peril: Why Do We Usually Get The Future Wrong?. A top consultant for the US government, as well as various technology and entertainment world projects, explores why it is that predictions of and plans for the future are so often so wrong. His discussion follows everything from organizational and bureaucratic resistance to change to frequent pitfalls of imagination.
