Larry Irving

Former NTIA Head Credited with Popularizing the Term Digital Divide

The Future of Technology In a forward-looking presentation, Larry Irving shares insights on the future of technology and what's coming down the pipeline. From wireless and cloud computing, to applications and mobile services, he looks at how the most successful companies are using new technology and how small businesses should be using tools like social media. Sitting at the intersection of politics, policy, and technology, he also addresses the political and economic implications and opportunities of new innovations and technology and how potential regulations might alter the playing field. Technology is revolutionizing the business environment, and Irving shows organizations how to best put it to their advantage.

Cyber Security and Its Foreign Policy Implications As more and more essential information is digitized, cyber security is becoming an increasingly important issue. From technology versus privacy issues and regulations of the internet to the ramifications of a major cyber attack, Irving shares insights on cyber security and the future of our online data in the modern age.
