

Trey Whitworth

Former Director of National Geospatial-Intelligence Agency (NGA), CEO r4 Federal

Five Principles for Leading AI Integration. As organizations race to adopt artificial intelligence, technology is only part of the equation. Based on his experience integrating AI across the National Geospatial-Intelligence Agency and the broader Intelligence Community, Retired Vice Admiral Trey Whitworth shares five principles for leading successful AI adoption at scale. He examines the progress made, the challenges that remain, and why building trust in both AI systems and human expertise is essential to realizing AI's full potential.

How to Build a More Adaptable Organization. Why do organizations readily embrace some innovations while resisting others? Retired Vice Admiral Trey Whitworth examines the barriers that often stand between recognizing change and acting on it. Using examples from emerging technologies, military innovation, and organizational transformation, he explores how leaders can challenge entrenched assumptions and build teams that are prepared for what's next.

Glancing Intelligence: Turning Information into Action. When you need people to understand and act on critical information, how do you ensure the most important insight doesn't get lost in the details? In this presentation, Trey Whitworth explores lessons from decades of briefing Chairmen of the Joint Chiefs, Directors of National Intelligence, and other senior leaders, revealing the art of turning complexity into action.
